

卷之三

A.I.G.

MARCH 1888

This high-contrast, black-and-white aerial photograph depicts a complex industrial facility, possibly a refinery or chemical plant. The central feature is a large cluster of rectangular storage tanks arranged in a grid pattern. Each tank has its own unique set of markings, including numbers and letters. To the left of this main group is a tall, lattice-style tower, which appears to be a distillation column. In the foreground, there's a large, irregularly shaped area with a dense, cross-hatched pattern, likely representing a paved surface or a specific type of industrial equipment. The entire facility is situated within a larger industrial complex, with various roads, smaller buildings, and other structures visible in the background and surrounding areas.
